

PROFESSIONAL SUMMARY

Frontend-focused Software Engineer with close to 4 years of experience building scalable web applications, automation systems, and business-oriented digital platforms across startup and agency environments. Growing in Next.js and Python with hands-on experience leading teams, implementing pixel-perfect UI/UX designs, and developing workflow automation solutions. Strong adaptability across technologies with a focus on clean implementation, performance, problem solving, and scalable engineering.

TECHNICAL SKILLS

Languages, Libraries & Frameworks: JavaScript (ES6+), TypeScript, Python, ReactJS, Next.js, HTML5, CSS3, TailwindCSS, PHP
Tools & Technologies: Selenium, Git & GitHub, shadcn/ui, Vite, WebFlow, Chrome Extensions
Core Strengths: Responsive Web Design, Frontend Engineering, UI/UX Implementation, Automation Engineering, Component-Based Architecture, Team Collaboration, Client Communication, Agile Startup Execution, Search Engine Optimization (SEO)

PROFESSIONAL EXPERIENCE

- Creadivs - Software Engineer** | July, 2023 - Present
- Delivered web solutions and other digital services for clients across multiple industries using diverse technologies.
 - Developed e-commerce platforms and business websites for healthcare, agriculture, and commercial sectors.
 - Built responsive frontend interfaces and product showcase platforms tailored to client requirements.
 - Delivered end-to-end website solutions including UI implementation, optimization, and deployment.
 - Worked on technical and on-page SEO improvements to enhance website visibility and performance.
 - Contributed to client communication for project scoping, requirements gathering and scalable web solutions delivery.
 - Worked on technical planning, requirement gathering, and project scoping across multiple projects.
 - Handled deployment and provided post-deployment support.
 - Collaborated with small-to-medium teams to ensure timely and proper deliveries.
 - Mentored junior developers, providing technical guidance and code reviews.
 - Efficiently communicated with clients worldwide.
 - Contributed to scalable frontend architecture and component-driven development practices.

PROJECTS

- TTinit.com — TikTok Shop Affiliate Outreach Automation**
- Contributed to a WebFlow-based SaaS platform focused on TikTok affiliate outreach workflows.
 - Worked on frontend improvements and SEO during engagement at BitBash.

- CommerceKind.com**
- Led a developer team and collaborated closely with a UI/UX design team to pixel-perfectly transform a figma design into a full React.js website and made it fully responsive.
 - Implemented pixel-perfect UI components and collaborated on scalable frontend architecture.
 - Managed Git workflows including pull requests, branching strategies, and merge conflict resolution during development.

- MariTechnologies**
- Developed a responsive ReactJS frontend application from a loosely defined Figma design.
 - Improvise UI/UX decisions and implemented revisions collaboratively with the team and client.
 - Converted design concepts into production-ready interfaces while handling revisions and iterative improvements.
 - Contributed to modern frontend workflows and reusable component structures.

- Python Scraper & Automation System**
- Developed a Selenium-based (using Python) automation system for large-scale TikTok profile data extraction.
 - Automated navigation through social profiles and external links to collect contact details and social media information.
 - Built scalable scraping workflows capable of processing multiple datasets efficiently.

- Final Year Project (of my Bachelor's degree) — Computer Vision & Deep Learning**
In Association with Ecologix
- Assisted in dataset collection, training support, and testing workflows for a computer vision system.
 - Handled project documentation and technical reporting.
 - Developed the project web application using vanilla HTML, CSS, and JavaScript.

EDUCATION

Bachelor of Science in Computer Science
COMSATS University Islamabad, Lahore Campus

ADDITIONAL INFORMATION

- Experience working in fast-paced startup and agency environments.
- Strong ability to quickly adapt to new technologies and project requirements.
- Comfortable collaborating with designers, developers, and non-technical stakeholders.
- Have managed Git workflows including branching strategies, pull requests, code collaboration, and merge conflict resolution.
- Interested in frontend engineering, automation systems, and content creation.
