

PROFESSIONAL SUMMARY

Frontend-focused Software Engineer with close to 4 years of experience building scalable web applications, automation systems, and business-oriented digital platforms across startup and agency environments. Growing in Next.js and Python with hands-on experience leading teams, implementing pixel-perfect UI/UX designs, and developing workflow automation solutions. Strong adaptability across technologies with a focus on clean implementation, performance, problem solving, and scalable engineering.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), Python, ReactJS, NextJS, HTML5, CSS3, TailwindCSS
Tools & Technologies: Selenium, Git & GitHub, shadcn/ui, Vite, WebFlow, Chrome Extensions
Core Strengths: Responsive Web Design, Frontend Engineering, UI/UX Implementation, Automation Engineering, Component-Based Architecture, Team Collaboration, Client Communication, Agile Startup Execution, Search Engine Optimization (SEO)

PROFESSIONAL EXPERIENCE

- AestheTeQs - Senior Software Engineer** | March, 2025 - Present
- Worked on responsive applications using ReactJS, Vite, TailwindCSS, PostCSS, and other technologies.
 - Collaborated on projects across multiple industries with emphasis on scalable and maintainable UI implementation.
 - Converted design concepts into production-ready interfaces while handling revisions and iterative improvements.
 - Contributed to modern frontend workflows and reusable component structures.
- Develtro - Lead Developer** | January, 2025 - April, 2025
- Led a developer team and collaborated closely with a UI/UX design team to pixel-perfectly transform a figma design into a full React.js website (CommerceKind.com) and made it fully responsive.
 - Managed Git workflows including branching strategies, pull requests, code collaboration, and merge conflict resolution.
 - Mentored junior developers, providing technical guidance and code reviews throughout the project lifecycle. Also, assisted in the interviewing process.
 - Assisted upper management with client communication, technical planning, requirement gathering, and project scoping across multiple projects.
 - Contributed to scalable frontend architecture and component-driven development practices.
- BitBash - Software Engineer** | September, 2024 - October, 2024
- Built browser automation and web scraping systems using Python and Selenium.
 - Developed automation workflows for extracting contact information, social links, and structured data from web sources.
 - Worked on component-based frontend development using ReactJS, Vite, TailwindCSS, and shadcn/ui.
 - Contributed to the development of a Chrome Extension and responsive web interfaces.
 - Worked on SEO optimization initiatives across multiple projects.
 - Collaborated on a WebFlow-based SaaS platform.
- Creadivs - Freelance Software Engineer** | July, 2023 - Present
- Operated as an independent freelance software engineer under Creadivs, delivering web solutions and other digital services for clients across multiple industries using diverse technologies.
 - Developed e-commerce platforms and business websites for healthcare, agriculture, and commercial sectors.
 - Built responsive frontend interfaces and product showcase platforms tailored to client requirements.
 - Delivered end-to-end website solutions including UI implementation, optimization, and deployment.
 - Worked on technical SEO improvements to enhance website visibility and performance.
 - Collaborated directly with clients to gather requirements and deliver scalable web solutions.
 - Handled deployment and provided post-deployment support.

PROJECTS

- TTinit.com — TikTok Shop Affiliate Outreach Automation**
- Contributed to a WebFlow-based SaaS platform focused on TikTok affiliate outreach workflows.
 - Worked on frontend improvements and SEO during engagement at BitBash.
- CommerceKind.com**
- Contributed to a fully-responsive ReactJS-based frontend website during leadership role at Develtro.
 - Implemented pixel-perfect UI components and collaborated on scalable frontend architecture.
 - Managed Git workflows including pull requests, branching strategies, and merge conflict resolution during development.
- MariTech Development**
- Developed a responsive ReactJS frontend application from a loosely defined Figma design.
 - Improvised UI/UX decisions and implemented revisions collaboratively with the team and client.
 - Built reusable frontend components using ReactJS and TailwindCSS.
- Python Scraper & Automation System**
- Developed a Selenium-based automation system for large-scale TikTok profile data extraction.
 - Automated navigation through social profiles and external links to collect contact details and social media information.
 - Built scalable scraping workflows capable of processing multiple datasets efficiently.
- Final Year Project (of my Bachelor's degree) — Computer Vision & Deep Learning**
In Association with Ecologix | February, 2021 - January, 2022
- Assisted in dataset collection, training support, and testing workflows for a computer vision system.
 - Handled project documentation and technical reporting.
 - Developed the project web application using vanilla HTML, CSS, and JavaScript.

EDUCATION

Bachelor of Science in Computer Science

COMSATS University Islamabad, Lahore Campus | February, 2018 - January, 2022

ADDITIONAL INFORMATION

- Experience working in fast-paced startup and agency environments.
- Strong ability to quickly adapt to new technologies and project requirements.
- Comfortable collaborating with designers, developers, and non-technical stakeholders.
- Interested in frontend engineering, automation systems, and content creation.
